Best Buy Books Project
Phase 4 – Implementation

Application

Main page: http://db2.emich.edu/~201501_cosc471_group04/
Note: because db2 does not use the most recent version of mysql, some of the functionality will not work on it. We will therefore demo the project on a laptop.

Credentials

Username	Password	Type
root	root	admin
pegurnee	#password	customer
LastSonOfKrypton	password	customer

These credentials work on both on db2 and on the demo laptop.

Individual Contributions

A complete log of contributions can be found at:
https://github.com/pegurnee/cosc571_database_project/commits/master

We both worked on creating tables, writing queries, and writing PHP, HTML, CSS, and JavaScript. Eddie took lead on the database. He wrote triggers and functions. He also input the data we used, and refined our tables once they were created. He also created much of the search and checkout functionality. Tyler implemented the cart and login features, as well as client-side code including styles and AJAX calls.
